

Landfill Cover Design

West Lake Site

September 29, 2014

OSRTI input

Based on OSRTI review of the landfill cover design proposed workplan for West Lake, OSRTI supports the proposed approach to look at a hybrid of an UMTRCA and a Subtitle C cap. Our best technical estimate, based on the information available at this time, OSRTI believes that such a hybrid approach is likely the best approach for cap alternatives for the West Lake site.

We understand that other options such as an evapotranspiration cap (wouldn't meet ARARs) are not feasible.

OSRTI can provide additional concepts to assist Region 7's review of additional work by the PRP on landfill cover design if requested. OSRTI can also assist in the review of any materials, as requested by Region 7.
